

Access to Pleasants Peak Electronic Site from Corona

A common meeting place for people going to Pleasants Peak is at the McDonalds Restaurant, at the intersection of Lincoln Avenue and the 91 Freeway. From this starting place, proceed towards the mountains on Lincoln Avenue 2.4 miles. Turn right on Foothill Parkway and proceed 0.6 miles to the end of the road. Turn into the housing tract and follow the detour signs for Skyline Rd. When you see a dirt road and gate, this is the start of **Skyline Drive**, a public county road. Unlock the gate, then close and lock after passing through. This is a two-way road, so proceed with caution. Continue on Skyline for several miles until you reach the turnoff to Sierra Peak on the right. There is a small building and a number of wooden poles nearby. Do not turn, but proceed straight ahead on Skyline another 0.5 mile to the large Forest Service gate at “Beeks Place.”

Continue straight through the gate as you are now on Main Divide Road. This gate is normally open, but if it is closed, use your key. **Be sure to close and lock the gate, if you found it closed and locked.**

Proceed past Beeks old cabin and continue past the US Weather Service radar facility. This is a BIG white ball. Continue on Main Divide Road south another 2 miles to the West Pleasants Peak Electronics Site. Take the fork to the right and continue past the FAA facility and the Southern California Edison facility to the locked gate. Using the building key marked “Best”, unlock the chrome lock, and open the gate. You may leave this gate open while you are at the site. Just lock the lock to one end of the chain to prevent losing it.

Proceed to the building and before opening the main building door (door with sign), have your personal alarm code available. Upon opening the door, enter your alarm code and then press the “on/off” button to disable the alarm. If unsuccessful in entering your code correctly, just try again. You will have 60 seconds before the alarm sounds. If you accidentally set off the alarm, call the alarm company at the number shown next to the alarm panel.

You may now proceed to perform your work at the site, and if authorized, you may open other doors at the facility.

Upon leaving the site, close and lock all doors, other than the main door. From the inside, temporarily close the main door and again enter your alarm code. Finish by pressing the “on/off” button to set the alarm. You now have 60 seconds to exit the building and lock the door. Proceed through the open gate and lock it as you exit.

Any questions, or to report any unsafe conditions, call Fred Daniel at 949 640-8899
